7 GHz (4GB RAM) I have problems with my USB hub The update seemed to have been installed properly (two reboots and no error messages) but since then my Kensington track ball does no longer work after power on.. It appears that the TRACKBALLWORKS App was not responding well. The USB hub did work before the update and I did not change the configuration after the update.. I have to detach and reattach the USB hub to reactivate the trackball Kensington Usb AdapterThe problem does not occur after a restart (only after a power off/on cycle).
